Tailored solutions for agribusiness

The McLarens brand is synonymous with quality and we provide a differentiated service underpinned by experienced adjusters. Our business has attracted the best talent in the industry, operating an adjuster-led end-to-end process, without hand-offs to back offices.

The US Agriculture team specializes in all types of agricultural claims including complex manufacturing, food processing and grower claims. The team has extensive agricultural market experience with adjusters degreed in Agribusiness and Animal Science.

Client-specific solutions allow our business to achieve a market-leading reputation for service and technical excellence in agriculture. This includes drone-assist for surveying.

Our team of agricultural expert adjusters is trusted by the industry to deliver on a reliable scope and reserves while bringing the claim to a resolution working within the complex nuances of this industry.

When a micro-burst severely damaged the roof of one of our valuable inventory storage facilities, the McLarens agriculture loss adjustment team responded immediately. They helped us effectively secure a temporary solution and eventually a full roof replacement solution that significantly reduced downtime and mitigated the loss by \$50 million. Their services made a substantial positive impact.

– Broker of Beef Processing Client, 2021

Our McLarens US Agricultural hub is based in the Chicago office and provides a center of excellence supporting the team and its clients. The team maintains a consistent approach and delivery.

Case Study

Situation: An insurance broker was given the task of assigning an independent loss adjusting firm with a rich background in food processing to a shared and layered property program. McLarens was selected after multiple meetings and an onsite tour with the local plant managers and engineers ensued. We gained a unique understanding of the facility operations, local contractors, and business objectives.

inventory. The McLarens team immediately responded with a temporary roof installment and was promptly onsite working with the insurance broker and the insured's local team.

As the issue of a full roof replacement remained, roofing contractors estimated the entire roof replacement project would cause 30-45 days of downtime at the facility, leaving the customer exposed to a \$50 million business interruption loss and risk of losing market share. The McLarens team understood the importance of eliminating downtime and worked to find a roof replacement solution that would not halt production.

Outcome: McLarens eliminated additional downtime and mitigated the loss by more than \$50 million. Our close partnership resulted in:

- 30+ days of mitigated restoration time
- Reduction of estimated loss expectancy by 90% (\$5.5 million vs. \$55 million)
- Net loss ratio improvement of 99% (net loss \$500 thousand vs. \$55 million)

This mitigation success story was critical to the insurance broker's ability to retain incumbent capacity to renew the insured's property program. If not for this proactive mitigation approach, the insured would have faced market share pressure, and insurers would have been hit with a huge loss, making the customer's already challenging risk even more difficult to insure.

Scenario: A microburst significantly damaged the roof of a mission-critical box storage building that held valuable
