BIOGRAPHY

Graham began his aviation career in 1988 with British Airways where he qualified as a UK CAA licensed aircraft engineer, gaining experience and type approvals on both Boeing and Airbus aircraft. In 2001, he took the opportunity to gain experience as a contract engineer with various airlines in Europe and Africa before venturing out to South East Asia in 2005 as an EASA B1/B2 licenced engineer and later as Duty Maintenance Manager with notable flag carrier airlines in Singapore and Vietnam. Prior to joining McLarens Aviation, Graham worked with Boeing as their B787 Defect Analysis Engineer supporting the engineering operations of Scoot and Singapore Airlines. Working with the B787 since 2014 has gained him valuable knowledge of the latest generation of composite structures used on the most technically advanced airliner in the world.
